

## S-14      **Approved Chemicals Master List**

This form is used for two purposes:

1. As the list of approved chemicals **allowed** to be used on site. No hazardous chemical is allowed to be ordered, inventoried or used on site unless it is on this form.
2. As a list of the chemicals currently being **inventoried** at the site. At any given time, and “x” should be placed in the appropriate column on the form, if the chemical is in inventory on the site. As chemicals are no longer in inventory, the “x” should be erased.

For further information, see the *Safety Requirements and Procedures* section of the *Workplace Safety Program*.
